
将明文 m 编码为目标串 $S_t = \mathrm{Et}(m)$
随机取图 r，初始化 $p_0 = r/255$
叠加密钥得融合图 $i_n = p_n + k$
送入 DNN，读状态 $z(i_n)$，分组编码得 S_c
$S_c = S_t$?
否
计算 $L = l_{be} + \alpha l_d + \beta l_{id}$
R-FGSM 更新
$p_{n+1} = T_{trc}(\cdot)$
是
减密钥得密文 $c = i_n - k = p_n$
